2. Code Deliverables:

Code snippets for key components (e.g., ProductCard, ProductList, SearchBar).

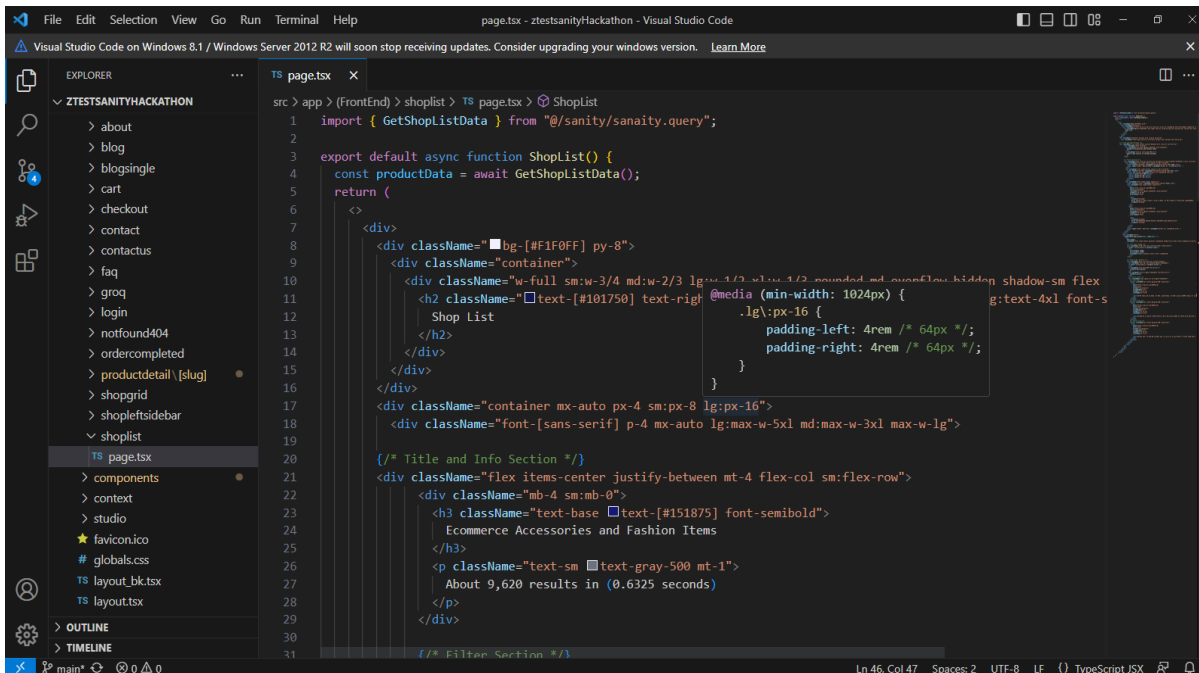

Product Detail Code:

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows the project structure: ZTESTSANITYHACKATHON > src > app > (FrontEnd) > productdetail > [slug] > TS page.tsx > ProductDetail. The main editor displays the code for ProductDetail.tsx. The code is a TypeScript file that uses Next.js and Tailwind CSS. It defines a page component that takes a slug as a prop and returns a JSX element. The JSX element consists of a header, a main content area, and a footer. The main content area is a flex container with a product image on the left and product details on the right. The product image is a responsive image with a width of 100% and a height of 500px. The product details include the product name, a description, and a rating. The rating is calculated based on the number of reviews and the average rating. The code uses the useState hook to manage the state of the product details. It also uses the useEffect hook to fetch the product data from the API. The code is well-commented and uses Tailwind CSS classes for styling.

```
35  />
36  </div>
37
38  /* Right Sidebar - Flex for Image and Description */
39  <div className="flex-1 flex flex-col lg:flex-row h-[500px]">
40    /* Product Image - Set to responsive width and height https://readymadeui.com/images/product2.w
41    <div className="w-full lg:w-[375px] h-full p-4 flex-shrink-0">
42      <img
43        src={process.env.BASE_URL+`${productData[0].image}`} // Make sure image URL is dynamically in
44        alt="Product"
45        className="w-full object-cover rounded-md"
46      />
47    </div>
48
49    /* Product Details - Description beside the image */
50    <div className="flex-1 pl-6 flex flex-col justify-between h-full">
51      <div>
52        /* Main Title (Product Name) */
53        <h2 className="text-2xl font-bold text-[#151875]">{productData[0].title}</h2>
54
55        <div className="flex space-x-2 mt-4">
56          /* Rating stars */
57          [...Array(4)].map((_, index) => (
58            <svg
59              key={index}
60              className="w-5 fill-[#FFC416]"
61              viewBox="0 0 14 13"
62            />
63          ))
64        </div>
65      </div>
```

Product Listing Code

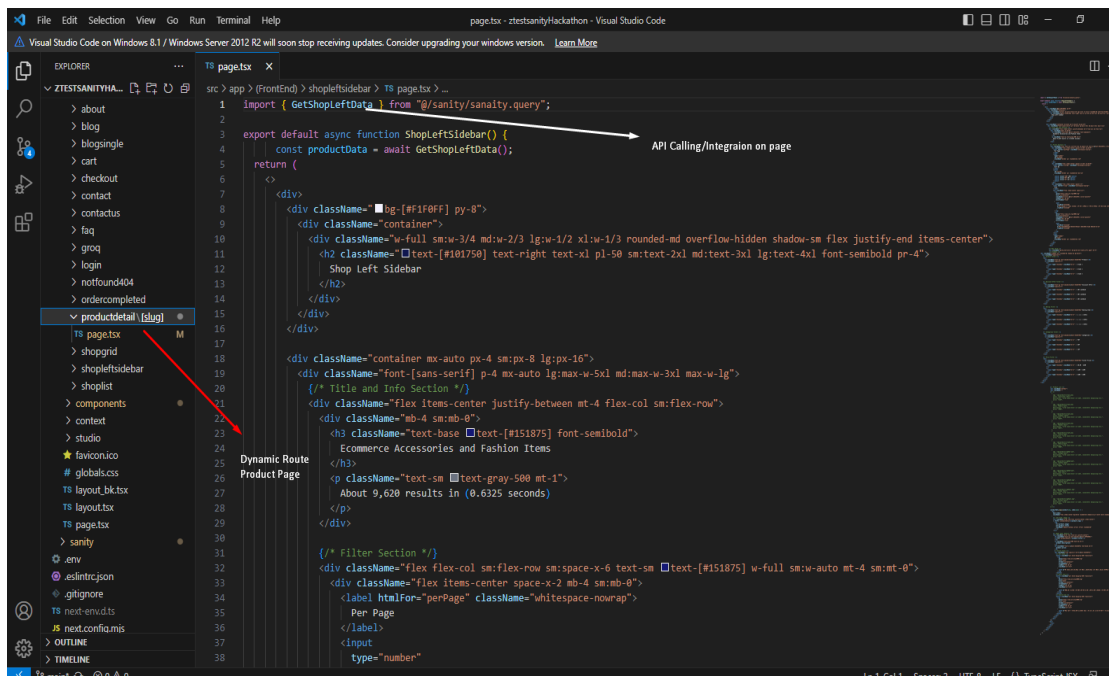

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows the project structure: ZTESTSANITYHACKATHON > src > app > (FrontEnd) > shoplist > TS paget.tsx > ShopList. The main editor displays the code for ShopList.tsx. The code is a TypeScript file that uses Next.js and Tailwind CSS. It defines a page component that takes a slug as a prop and returns a JSX element. The JSX element consists of a header, a main content area, and a footer. The main content area is a flex container with a product list on the left and product details on the right. The product list is a responsive list with a width of 100% and a height of 500px. The product details include the product name, a description, and a rating. The rating is calculated based on the number of reviews and the average rating. The code uses the useState hook to manage the state of the product details. It also uses the useEffect hook to fetch the product data from the API. The code is well-commented and uses Tailwind CSS classes for styling.

```
1  import { GetShopListData } from "@sanity/sanity.query";
2
3  export default async function ShopList() {
4    const productData = await GetShopListData();
5    return (
6      <div>
7        <div className="bg-[#F1F0FF] py-8">
8          <div className="container">
9            <div className="w-full sm:w-3/4 md:w-2/3 lg:w-1/2 xl:w-1/3 rounded-md overflow-hidden shadow-sm flex"

19
20                /* Title and Info Section */
21                <div className="flex items-center justify-between mt-4 flex-col sm:flex-row">
22                  <div className="mb-4 sm:mb-0">
23                    <h3 className="text-base text-[#151875] font-semibold">
24                      Ecommerce Accessories and Fashion Items
25                    </h3>
26                    <p className="text-sm text-gray-500 mt-1">
27                      About 9,620 results in (0.6325 seconds)
28                    </p>
29                  </div>
30                </div>
31              </div>
```

Product Card:

3. Documentation:

Technical Report: Development and Integration of Components

In this project, I used Next.js 14 to build and integrate reusable components that would be called across different pages of the application. The process began by creating individual components within the components folder, which allowed for better organization and reusability throughout the project. Each component was created using the export default syntax to ensure that it could be easily imported and utilized on the relevant pages. When calling a component on a specific page, I used the import statement along with the correct path to the component file, ensuring that the code was properly structured and readable.

One of the challenges I faced during development was related to correctly referencing the path of the components when importing them into various pages. Initially, there were issues with relative paths, which caused errors in loading the components. However, I resolved this issue by carefully reviewing the folder structure and correcting the import paths, ensuring that each component was properly linked to its respective page. This challenge helped me gain a deeper understanding of the importance of maintaining a clear and logical file structure within the project.

Throughout the development process, I followed several best practices to ensure the quality and maintainability of the code. One of the key practices was adhering to a consistent naming convention for both component files and folder structures. This not only made the code easier to navigate but also ensured that components were easily identifiable and could be scaled in the future. By organizing components in dedicated folders and using clear, descriptive names, I was able to create a clean and efficient development environment that facilitated smooth integration of components into various pages.

In conclusion, by following best practices for folder organization, naming conventions, and component structure, I was able to build and integrate reusable components effectively in Next.js. Despite facing challenges with path references, I successfully resolved them, and the process ultimately enhanced the overall structure and maintainability of the application.

This summary provides a clear and concise report of the steps, challenges, and best practices followed during the development.

4. Repository Submission: submitted on “Documents” folder on GitHub Repo.

5. Checklist for Day 4:
